

AKANIMO EYOMA

DATA ANALYST

PROFESSIONAL SUMMARY

Data analyst and developer with practical experience in data analysis, business intelligence, machine learning, data visualization and web-based analytics applications. Skilled in turning datasets into dashboards, analysis and working applications using Excel, Power BI, Tableau and Python.

EDUCATION

B.Sc. Information Technology — Babcock University | 2022 – 2026

WORK EXPERIENCE

Data Analyst — New Horizons | Jan 2025 – Jun 2025

Completed a six-month internship focused on data analytics and machine learning, working with data analysis, visualization, dashboards and machine-learning workflows.

- Developed machine learning models using Python libraries to support data analysis.
- Created data visualizations and dashboards using Excel, Power BI and Tableau.
- Applied technical skills to support business insights through data analysis and visualization.

CORE TECHNICAL SKILLS

Business Intelligence: Excel · Power BI · Tableau · DAX · Power Query

Data Analysis: Python · Pandas · NumPy · Exploratory Analysis

Visualization: Matplotlib · Seaborn · Dashboard Development

Machine Learning: Scikit-learn · K-Means · KNN · Regression · DBSCAN

Development: FastAPI · Streamlit · Flask · Jupyter Notebook

Tools: MySQL · Git · GitHub · Jupyter

SELECTED PROJECTS

Crime Risk Classification System — K-Means / FastAPI: Built a K-Means clustering system that groups crime patterns across Nigerian states, interprets clusters as risk levels and exposes the model through a FastAPI application.

College Placement Prediction — KNN / Streamlit: Built a K-Nearest Neighbors model to predict student placement outcomes and deployed it as an interactive Streamlit application using saved model and encoding artifacts.

Car Price Prediction App — Streamlit: Developed and deployed a machine-learning car price prediction application, combining model development with an interactive web interface.

Road Accident Dashboard — Power BI: Created an interactive dashboard analysing casualties, accident severity, vehicles, road conditions, road types, light conditions and living areas.

Sales Report Analysis — Power BI: Analysed sales by branch, zone, employee and product, using Power Query for preparation and DAX for measures and KPI calculations.

Product Sales Analysis — Tableau: Built a Tableau dashboard covering revenue, cost, profit, product categories and geographic performance.

Office Supply Analysis — Tableau: Analysed revenue, cost, units sold, products, payment channels, customer segments and monthly sales trends.

Vrinda Store & Food and Beverage Analysis — Tableau: Created Tableau dashboards exploring e-commerce/customer sales patterns and food-and-beverage performance across products, channels and salespeople.

PROFESSIONAL PROFILE & CAREER FOCUS

Combines analytics, business intelligence, visualization, machine learning and application development. Career focus: Data Analytics · Business Intelligence · Machine Learning · Data Visualization · Web-Based Analytics Applications.
